

Participants came from 10 different countries and shared their experience with each other.

Unitech European Workshop

Barcelona 2018

UniTech Europe held its 14th International workshop in Barcelona on October 17th and 18th. The main event comprised of two round table discussions about how new technology, especially technology of the digital revolution could help or improve decommissioning processes and reduce radioactive waste.

The technical visit took place at the Vandellós 1 site.

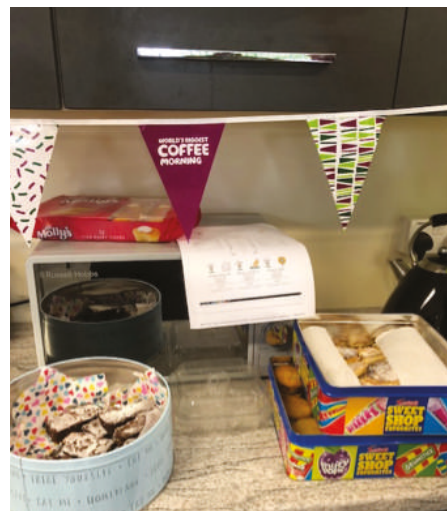

Oakdale Raises £400 towards Macmillan Cancer Charity

**WE ARE
MACMILLAN.
CANCER SUPPORT**

In support of the Macmillan Cancer Foundation, Oakdale raised a fantastic £400 towards the charity. There was a fabulous effort by many of the staff in making cakes which were sold for charity as part of the coffee break. In addition to this there was a raffle with various prizes supported by the staff and the Plant. People were also asked to bring in old school photos for which the Plant Manager donated £5 for every old school photo brought in.

Also as part of the donation, the Plant Manager offered to wear a Wales shirt at a forthcoming Rugby International only if someone paid more than £25 at an auction. Eventually the winning bidder paid £80 to see an Englishman wear a Welsh Rugby top!

The Society for Radiological Protection (SRP) Conference and Exhibition Southport, United Kingdom

Unitech UK recently took part in the SRP Conference and Exhibition. Interest in products and services offered by Unitech was high with many follow up meetings planned. The UK team also won the best exhibition stand for the conference voted for by the attending delegates.

A.T.S.R. Workshops

Bagnols-sur-Cèze / France

26-27-28th September 2018

UniTech Services France recently took part to the A.T.S.R. Workshops which topic was Health physics and Decommissioning. The Association for Technics and Science of Health physics (A.T.S.R.) aims to encourage knowledge and improve practices in health physics.

Ideally organized on CEA Marcoule Centre considering decommissioning activities which have started 20 years ago, a lot of participants came to discover demonstrations and exhibition of various products on stands or in show rooms.

Among the products exhibited by the French team, the air purifying CleanAir 3F unit - associated with our ventilated hood, a Dräger respirator or our UniVent and Isar coveralls - attracted curiosity.

Questions were also raised about the construction of the logistics hubs project **ONE Tech**, which will open in 2020 in Champagne region, and the Module Hall, next to the laundry, and its spaces dedicated to radiological works available for rent.

The next exhibition UniTech Services France is going to participate in will be the EDF Health physicians Club in Strasbourg.

Spirobox 2

The Spirobox 2 is the new generation of breathing air treatments. It is a mobile respiratory system, that can be used in contaminated hazardous environments. With this device, compressed air can be converted to breathing air. Due to its flexible design, it can be used everywhere.

Furthermore, it has an emergency supply through 2 composite cylinders, which continue to supply the employees with breathing air in case of emergency. The cylinder storage system contains 4080 liters of breathing air in two 6.8 L / 300 bar composite cylinders. The breathing air is automatically used either from the operating air or from the reservoir. The air distribution works pneumatically and not electrically.

The air conditioning unit consists of one filter with an automatic condensate drain, a micro-fine filter and an activated carbon filter. If the operating air fails, the employee is informed by an acoustic and optical signal (flashing light). Inside, the whole unit is protected against contamination and also 100% decontaminable.

The Spirobox 2 is designed for the use of 2 people.
